

Excel Image Renamer - Quick Start

This tool renames image files using an Excel mapping table.

Example: 01_報紙.png -> Newspapers.png 03_剩菜剩飯.png -> Leftovers.png

1. Folder structure

Put your files like this:

```
excel-image-renamer/ rename_images.py mapping.xlsx requirements.txt image/ 01_報紙.png 03_剩菜剩飯.png 08_陶瓷碎片.png
```

2. Prepare the Excel file

Open mapping.xlsx.

Use column A for the Chinese name. Use column B for the English filename.

Example:

A column B column 報紙 Newspapers 剩菜剩飯 Leftovers 過期藥品 Expired medicines 塑料飲料瓶 Plastic drinks bottles 陶瓷碎片 Ceramic shards

Blank rows are allowed.

The Chinese name and English name must be on the same row.

3. Install requirements

Windows users can double-click:

1_install_requirements.bat

Or run this command manually:

```
pip install -r requirements.txt
```

4. Preview rename results

Before renaming real files, always preview first.

Double-click:

2_preview.bat

Or run:

python rename_images.py

The script will generate report files, including:

rename_reports/renamed_report.csv rename_reports/unmatched_images.csv rename_reports/missing_images.csv

Check renamed_report.csv before applying changes.

5. Apply rename

After checking the preview report, double-click:

3_apply_rename.bat

This will rename the image files.

6. Important notes

- Do not remove the image folder.
 - Put all image files inside the image folder.
 - Keep mapping.xlsx in the project folder.
 - Blank rows in Excel are okay.
 - Filenames such as 01_報紙.png are supported.
 - Excel names with brackets are supported, for example: 堅果殼 (如核桃殼) can match 堅果殼.png
-

7. Report meaning

renamed_report.csv: Images that can be renamed.

unmatched_images.csv: Images found in the folder but not found in Excel.

missing_images.csv: Items listed in Excel but no matching image was found.

incomplete_excel_rows.csv: Rows where only one side was filled in Excel.

duplicate_chinese_rows.csv: Duplicate Chinese names after normalization.
